

Stacey,

I just wanted to let you know how much I am enjoying using your materials. My classes are going smoother and we are covering much more material faster than I have ever done before. The ease of the layout, the different formats, the Power Point presentations, and the numerous labs and worksheets are all very helpful to the kids as the repetition helps them retain the concepts being taught.

I also appreciate the flexibility of the materials. My students have different needs as I am sure all teachers experience. One of the ways in which I modify the material is by having my students complete some of the labs from scratch without using the provided templates. I feel this process further helps my students utilize what they have learned in the lessons covered.

Thank you for taking the time to develop these materials and making them available!
